What is Ventilation?

Ventilation is simply the process of supplying a continuous supply of air through the attic space. "Proper Ventilation" consists of 50% intake ventilation, near the lower part of the attic space, and 50% exhaust ventilation, near or at the roof peak, at least 3 feet higher than the intake system.

Why Ventilate?

To fight the enemies, heat and moisture, you must ventilate year round. Heat in unventilated attics may cause temperatures to exceed 150 degrees causing damage to shingles, roof sheathing, and possibly radiate to the living area. Moisture, being the #1 enemy, causes rot, mildew, mold, paint blisters, and renders insulation to be ineffective. Proper ventilation reduces energy bills, winter ice build up, and eliminates mold/mildew which can lead to major health problems. By ventilating, you are extending the life of shingles, insulation, and other building components.

Why Lomanco?

Lomanco has been producing quality ventilation products since 1946. Two factors have remained the same throughout the years. They are known as "The Lomanco Balance", free movement of air and weather protection. We take a great deal of pride in the production of our products. They are the necessity to be effective in ventilating homes everywhere. Product design does make a difference in quality ventilation products. Our commitment to providing these quality products, combined with our experienced personnel, is the reason Lomanco is your best choice for ventilation.

THREE MUST DO Steps to Attic Ventilation

1

Install all Exhaust Ventilation at the SAME HEIGHT within a common attic area.

Installation of exhaust vents at more than one level on a roof allows the upper exhaust vent to pull air in from lower exhaust vents rather than from the intake vents. Intake air must come from intake vents located near the lower part of the attic space to properly ventilate the total attic area and eliminate weather infiltration.

2

Install ONLY ONE TYPE of Exhaust Ventilation within a common attic area.

Exhaust Vents pull air from the easiest intake source. Vent types cannot be mixed. The use of different types of exhaust vents could make one of the vents act as intake for the other. Intake air must come from intake vents located near the lower part of the attic space to properly ventilate the total attic area and eliminate weather infiltration.

3

Install a BALANCED SYSTEM of Intake and Exhaust Ventilation.

50% Intake Ventilation - Intake vents located near the lower part of the attic area are required to balance out your ventilation system.

50% Exhaust Ventilation - Use a Lomanco Ventilation Selector Guide, or the calculators at lomanco.com, to determine the number of vents needed to properly ventilate an attic to meet the Ventilation Minimum Property Standard.

LOR-30

Lomanco® Shingle Over Ridge Vents

Lomanco Omni Series Ridge Vents are available in two styles and many variations. The roll version comes in easy to handle 20 and 30 foot lengths, while the stick version comes in 4 foot lengths. The regular **Omni style** is traditionally installed using a hammer, while the **Lo-Omni style**, with its low profile, can be installed using a nail gun.

Features—All Omni Series Shingle Over Ridge Vents come with a lifetime limited warranty. The engineered material guarantees it will last as long as your shingles.

Other common features of Omni Series Ridge Vents is the air flow acceleration design, which maximizes ventilation capacity, along with the internal aerodynamic curved baffles and external perpendicular omni baffles, which maximize weather protection. External omni baffles allow air flow from any direction, while the internal baffles maintain superior weather protection and performance with no filter to clog. Each Omni Series Ridge Vent design is field tested and proven effective under all weather conditions.

Installation—Installation of Omni Series Ridge Vents is fast and easy and will fit any roof pitch from a 2/12 to a 16/12. The Omni Series Ridge Vents feature supported nail holes every foot and will not crush down. Molded-in visual nail lines and center lines along with the patented fan-folded end plugs mean no accessories, connectors or alterations are needed.

Common Features

- ▶ Lifetime limited warranty.
- ▶ Adjusts from 2/12 to 16/12 roof pitches.
- ▶ Engineered material guarantees longevity.
- ▶ Field tested design - proven effective under all weather conditions.

Static Roof Vents

Lomanco® Static Roof Vents

Lomanco provides a complete line of Roof Vents from which to choose. Static Vents are available in two designs, Slant Back and Pan Style, to fit all of your ventilation needs. The Slant Back design is available in Aluminum, Plastic, and Galvanized finishes. Lomanco Pan Style Series consists of the 550, 600, and 135 Roof Vents and is available in aluminum finish only.

Features—L o m a n c o Static Vents are exhaust vents by design. Each vent's unique design offers maximum weather protection. All of Lomanco Static Roof Vents are available in several colors to blend with your roofing materials. Other

common features include a bird-proof design, a weather tight sealed collar, and a high profile and rolled flange on the vent stack for superior weather protection and circulation.

Installation—

All Lomanco Static Vents offer a large nailing flange for ease of installation. The Lomanco® Slant Back is designed to be installed on any roof pitch.

All-Weather Turbine Vent Whirlybird®

Lomanco® Whirlybird® Turbine Vents

Lomanco is the home of the original Whirlybird Turbine Ventilator, the All Weather Whirlybird Turbine. Whirlybird Turbines offer all of the essentials for energy savings and are geared toward going green. They are available in three sizes—8", 12", and 14". The 14" Big Whirly turbine moves 37% more air than the 12". The 12" turbine is available in aluminum and galvanized finishes as well as a Tile Roof design. Whirlybird turbines are also available in two models—internally or externally braced. While the internally and externally braced turbines both have the same internal construction, the externally braced turbines have three braces that surround the outside of the turbine.

Features—All Lomanco Whirlybird turbines come with a Lifetime Transferable Warranty. Simply put, you can't buy a better turbine. The turbine design features permanently lubricated upper and lower ball bearings that ensure long life and no maintenance. Other common features of the turbine are its rigid spider-type construction—riveted at every connection and tested to withstand winds of 110 M.P.H., 21 air-foil curved vanes with rolled edges to deflect water, and 100% rust-free all-aluminum construction.

Installation—The Whirlybird turbine's large flashing makes installation easy. The Whirlybird turbine's exclusive vari-pitch base adjusts to a 12/12 roof pitch for use on many roof applications. When installed properly, the Whirlybird turbine reduces energy bills and the likelihood of winter ice buildup.

Lomanco® Standard Power Vents

Lomanco Standard Power Vents are designed for quiet operation and high volume air removal. Lomanco offers two styles of electric power vents—the LomanCool 2000 and the 1800 Add-A-Vent. The LomanCool 2000 is a roof mount power vent and the 1800 is designed to be mounted behind an existing vent to add powered ventilation to a gable.

Features—Lomanco Standard Power Vents are made of all aluminum construction. Other common features include a 5 year limited warranty, balanced fan blades for quiet operation, and an American-made motor. An optional humidistat is available for both the 2000 and the 1800. The LomanCool 2000TH comes equipped with an adjustable thermostat/humidistat combo control to accommodate individual attic humidity levels.

Installation—Lomanco Standard Power Vents are equipped with an adjustable thermostat that features a “push-to-test” button, allowing homeowners to make sure the unit is operating properly.

Available Colors

Add-A-Vent 1800

- ▶ Factory-set adjustable thermostat (switches on at 100 degrees and off at 85 degrees).
- ▶ Can be mounted in horizontal or vertical positions on either 16" or 24" on center framing members.
- ▶ Optional humidistat is adjustable to fit individual attic humidity levels.
- ▶ Designed to mount behind existing gable louver.
- ▶ 5 Year limited warranty.

Omni Solar Vent™

OSV40

Lomanco® Solar Power Vents

Lomanco Solar Power Vents are your attic's best choice for solar powered protection against heat and moisture from sun-up to sun-down. We have created a unique design that is not only functional, but looks good on the roof.

Features—The Omni Solar Vent and Omni Solar Gable vent feature a 40+ Watt solar panel, the largest standard panel offered on solar attic vents.* They also include a 10 year limited warranty and a 5 Year limited warranty on the solar panel and motor. Other common features include a whisper quiet motor and precision balanced 5 blade fan.

Installation—Installation couldn't be easier with our Solar Power Vents. In fact, there is no need for an electrician. The Omni Solar Vent and Omni Solar Gable Vent will operate automatically when the solar panel is illuminated by sunlight.

Available Colors

Omni Solar Gable Vent

- Provides additional ventilation to gable vents.
- Whisper quiet motor.
- Precision balanced 5 blade fan.
- 768 square inches of Net Free Area required for each vent.
- Glass-filled polypropylene shroud.

- The OSV40 is a **Proven Best Performer** for solar powered attic ventilation.
- Heavy duty aluminum construction.
- Upward exhaust prevents roof discoloration.
- Low profile design blends with roof profile.
- Internal screen for added protection.

Common Features

- 40+ Watt solar panel.*
- 15 foot power cord.
- Solar panel remotely mounted for optimum energy collection.
- Easy Installation. No electrician required.
- 10 Year limited warranty, 5 Year on solar panel & motor.
- Eligible for a 30% Federal Tax Credit for Homeowners. See the Solar Power Vent page on lomanco.com for further details.

Off Roof Edge Installation

NEW!

Deck-Air® Vent

The Lomanco Deck-Air® is a low profile shingle over intake vent that can be installed on or off the roof edge. The DA-4 also has the option to be used as an off-ridge exhaust vent.

Features—The DA-4 has a unique design for enhanced weather protection and is made from the same durable, long lasting and field tested material as the Lomanco Omni Series. The DA-4 offers 9 square inches of Net Free Area per linear foot and comes with a Lifetime Limited Warranty.

Installation—The DA-4 is designed to fit any roof pitch from a 3/12 to a 16/12. Installation is made easy with supported nail holes, molded nail lines, shingle stop alignment tabs, slot width guidelines, and integrated end plugs every 2 inches.

Off Ridge Exhaust Installation

Deck-Air® Vent as Exhaust

EXHAUST INSTALLATION APPLICATIONS:

Omni-Wall™

The Lomanco Omni-Wall Shingle Over Vent offers functional ventilation for where your roof joins a wall. The OW-4 may also be used in a contemporary shed roof (mono-slope/single-slope) application.

Features—The OW-4 is designed for maximum weather protection, offering internal aerodynamic curved baffles with external perpendicular omni baffles. An external water shield and four drain holes per foot are also incorporated into the design of the vent. The OW-4 offers 9 square inches of Net Free Area per linear

foot and comes with a Lifetime Limited Warranty.

Installation—The OW-4 is designed to fit any roof pitch from a 2/12 to a 16/12. Installation is made easy with supported nail holes, molded nail lines, alignment tabs, slot width guide lines, and molded-in end plugs.

OW-4

- ▶ Weatherproof underlapping joint.
- ▶ External venturi baffle.
- ▶ Supported nail holes.
- ▶ High grade, high impact UV resistant material.
- ▶ Lifetime limited warranty.

LPR / VUR

Lomanco offers two styles of Aluminum Ridge Vents—the LPR and VUR. The LPR Ridge Vent is available in 8' or 10' sections and is adjustable to fit 3/12 to 12/12 roof pitches. The VUR Ridge Vent is available in 10' sections and is adjustable to fit 3/12 to 8/12 roof pitches.

Features—Lomanco LPR and

VUR Ridge Vents are made of embossed aluminum finishes for added strength, extended paint life, and blending appearance with shingles. Both offer a high Net Free Area—18 square inches of NFA per foot.

Installation—The LPR and VUR are manufactured with pre-notched nail holes for easy installation. Both are one-piece construction and can be cut at desired length at two-foot intervals.

Hurricane straps and tight fitting, high density polyethylene foam end-plugs are available for both the LPR and VUR.

Powered Crawlspace Vent

The Lomanco® Powered Crawlspace Vent (PCV1) is a quick and simple solution for under-ventilated crawlspaces. The PCV1 upgrades your present foundation vent and dries the crawlspace gradually. The PCV1 is made of tough polypropylene construction.

Installation—The PCV1 mounts behind an existing foundation vent for invisible operation and offers easy installation in a variety of constructions.

PCV1

- ▶ Quiet 110 CFM ball bearing motor.
- ▶ Humidity sensor for worry free operation.
- ▶ Thermostat shuts fan off at low temperatures.
- ▶ U.L. approved means assured safety.
- ▶ Can help stop mold growth.
- ▶ Upgrades your present foundation vent.
- ▶ 1 year limited warranty.

EVA-34 & EVA Combo Vent

Lomanco offers an exhaust vent adapter for our Static Roof Vent Series. The EVA-34 works with any Static Roof Vent while blending with existing accessories. The EVA-34 is designed to fit a 3" or 4" flexible duct. The EVA Combo Vent is a Lomanco® 730 Static Roof Vent that comes with an EVA-34 adapter.

Installation—The EVA-34 is ideal for new construction and can be a solution for existing homes as well. The EVA-34 can be installed from the top of the roof deck or from inside the attic to the Static Roof Vent or to a Cornice Vent in the soffit area.

EVA-34

- ▶ Exhaust vent adapter fits 3" or 4" flexible duct.
- ▶ Installs from top of deck or inside of attic to roof vent or cornice vent.
- ▶ Exhausts household moisture.
- ▶ Tested for all climates.
- ▶ Built in damper prevents backdraft.
- ▶ Works with any roof system.
- ▶ Ideal for new construction.
- ▶ Solution for existing homes.
- ▶ Blends with existing accessories.
- ▶ 10" nailing flange.

Model	Size (in.)	Fits

Cupola & Weather Vanes

The Lomanco® DRB-24 Cupola offers an elegant answer to your ventilation needs. The DRB-24 is made of all aluminum construction. A built in rain shield and an 8x8 perma-coated screen are engineered into the design to assure maximum weather protection.

Installation—The DRB-24 has a vari-pitch base that adjusts from a 2/12 to a 6/12 roof pitch. It is installed over a 17" by 17" hole, straddling the roof peak. Weather vanes are also available in four styles and are sold separately.

Weather Vane Features

- ▶ Cast aluminum with black enamel finish.
- ▶ Four styles available.
- ▶ Weather vanes include ornament pole and directional.
- ▶ Measures 24¼" high and arrow under the main figure is 18½" long.
- ▶ Clutch bases are available from Lomanco on special order. For use on pitch roof when not using a cupola.

TileRidge® Vent

TRV-4

The **Lomanco® TRV-4 TileRidge** exhaust vent provides proper and functional attic ventilation for tile roofs (compatible with high and medium profile “S” tile roofs with 2”x 6” ridge pole at this time). The excellent airflow design of the TileRidge affords superior weather protection with no filter to clog.

Features—The TRV-4 is made of a tough, durable engineered material that guarantees longevity backed with a 30 year transferrable warranty. The TileRidge can be used with any intake vent that will provide the proper amount of NFA for a balanced system. If possible, Lomanco recommends using the TileRidge exhaust vent with the TileIntake intake vent for a complete Tile Roof Ventilation system.

Installation—The TileRidge design and installation method allows the vent to be completely concealed under the cap tile. Installation will work with mortar or other approved weather blocking material. Since the vent is installed on each side of the ridge pole, the Net Free Area (NFA) is 9 square inches per side, per linear foot. This equals 18 square inches of NFA per linear foot of installed vent. The bottom integrated hinge allows the vent to be installed on 2/12 through 8/12 roof pitches.

Installed Section View

- ▶ Functional and concealed ventilation installed under the cap tile.
- ▶ Works on high & medium profile “S” tile roofs with 2”x 6” ridge pole.
- ▶ Interlocking self alignment design with weatherproof over lapping joint.
- ▶ Works with mortar or other approved weather blocking material.
- ▶ 18 inches Net Free Area per linear foot of installed vent. 9 square inches per side.
- ▶ Molded-in weep openings, nail holes and end plug.
- ▶ Internal water shield.
- ▶ Also available in **CLASS A FIRE RATING**.
- ▶ 30 year transferable warranty.

Omni Solar Vent™ for Tile Roofs

The **Lomanco Omni Solar Vent** is your attic's best choice for solar powered protection against heat and moisture from sun-up to sun-down. Use the power of the sun to cool your attic! It is the **PROVEN BEST PERFORMER** for solar powered attic ventilation.

Features—The Omni Solar Vent has a unique, sleek design that blends well with roof profiles. Its design makes it impossible for birds or other pests to get into the attic through our vent.

Installation—The Omni Solar Vent is a great option for your tile roof. To install the Omni Solar Vent on a tile roof, the vent must be installed on a raised curb. The installation requires no electrician.

(See page 11 for additional information.)

TileIntake® Vent

The **Lomanco® IV-9 TileIntake** vent provides proper and functional intake of your attic space for tile roofs. The unique design and installation method insures complete invisibility. The IV-9 works on all tile roofs with use of a batten system.

Features—The TileIntake vent has excellent airflow design with superior weather protection and no filter to clog. Each vent features interlocking self alignment designs with weatherproof over lapping joints. The TileIntake can be used with any exhaust vent that provides the proper amount of NFA for a balanced ventilation system. If possible, Lomanco recommends using the TileRidge exhaust vent with the TileIntake intake vent for a complete Tile Roof Ventilation system.

Installation—The TileIntake vent is installed underneath the tiles and gets outside make-up air from the airspace between the roof tiles and the roof decking. A constant air supply is provided to this space from the permeability of the tile roof itself. The Tile Roof Institute states, “Natural air ventilation under the tile creates a heat transfer barrier that can provide the benefit of a cooler house in the summer and a warmer house in the winter.” The Lomanco TileIntake not only utilizes this natural air ventilation, but will also increase the circulation of the air in the batten space. This will influence the dispersion of moisture and energy performance of the roof.

The TileIntake vent will work on 2/12 and up roof pitches. The vent is molded in 4 foot lengths with a NFA of 9 square inches per linear foot. Alternate installation methods that require no batten system are available.

Installed Section View

- ▶ Complete invisibility when installed.
- ▶ Aerodynamically curved internal baffles to minimize wind resistance.
- ▶ Excellent airflow design with superior weather protection and no filter to clog.
- ▶ Tough durable construction.
- ▶ Interlocking self alignment design with weatherproof overlapping joint.
- ▶ Quick, easy installation.
- ▶ Works on all tile roofs with use of a batten system.
- ▶ 9 inches Net Free Area per linear foot.
- ▶ Supported molded in nail holes.
- ▶ Molded-in weep openings, nail holes and end plug.
- ▶ Cut line provided for two foot lengths.
- ▶ Engineered material guarantees longevity.
- ▶ 30 year transferable warranty.

Tile Roof Turbine Vent

Lomanco offers a turbine option for your tile roof. Our BIB12TR & BEB12TR are approved for all tile and slate roof constructions.

Features— All Lomanco Tile Roof Turbines come with a Lifetime Transferable Warranty. Simply put, you can't buy a better turbine.

Installation—The Tile Roof Turbine's large flashing makes installation easy. The Tile Roof Turbine's exclusive vari-pitch base adjusts to a 12/12 roof pitch. (See pages 8-9 for additional information.)

About Intake Ventilation

Inadequate intake is the #1 cause of failure of the attic ventilation system. Specifically, inadequate intake results in extreme heat buildup in the summer and severe weather infiltration and moisture problems in the winter.

The intake system must provide as much as or more than the exhaust system in Net Free Area.

Proper vent chutes should be installed before blown in insulation, to prevent choking your intake system. A good rule of thumb is to place one between each set of rafter tails in order to maximize intake air.

If maintenance free vinyl/metal under eave panels are used, the vented panels should be installed continuously around the under eave portion of the house.

If the under eave width prohibits the use of cornice or strip vents—never use an exhaust louver as an intake vent. The most logical solution would be to install SV-10 or Deck-Air® intake vent (see page 12).

Lomanco® Foundation Ventilation

Lomanco provides a complete line of Foundation Vents. Lomanco offers foundation vents in Plastic, Die-Cast Aluminum, and All-Aluminum Construction. Foundation vents are available in several styles- shutter style, hinged louver style, and with a damper for tight closure.

Features—Lomanco Foundation Vents are designed with an 8x8 perma-coated aluminum screen attached and are engineered for maximum weather protection. Most vents are available in the standard concrete block size- 16"x 8".

199
J209

- ▶ Polypropylene plastic.
- ▶ Easy working 2-slide shutter.
- ▶ J209 is larger in height to fit King and Queen Bricks.

Available Colors

106
106L
106S

- ▶ Die-cast aluminum.
- ▶ Aluminum damper for tight closure.
- ▶ 106-L has a 1-1/2" lintel on top for extra strength.
- ▶ 106-S does not have damper.

Available Colors

179

- ▶ Heavy die-cast aluminum.
- ▶ 3-slide shutter provides maximum ventilation.

Available Colors

189

- ▶ All-aluminum construction.
- ▶ Three hinged louvers.
- ▶ Embossed painted finish, available in black and brown, adds strength, extended paint life, and durability.
- ▶ 189G is available in galvanized mill finish only.

Available Colors

2711
2712

- ▶ Extruded aluminum construction.
- ▶ Deep louvered blades.
- ▶ Overlapping top and bottom.
- ▶ 2711 replaces a single brick.
- ▶ 2712 replaces a double brick.

Available Colors

142
142F

- ▶ All-aluminum construction.
- ▶ Two-slide shutter for maximum ventilation.
- ▶ Self-framed on all sides.
- ▶ 142F flush mount with pre-punched holes for ease of installation.
- ▶ 142F used as replacement of existing block vents, mobile home skirting, and portable buildings.

Available Colors

Model	Size (in.)	Description	NFA (in. ²)
106	16 x 8	Die-cast aluminum with aluminum damper	64
106L	16 x 8	Same as 106 with 1 1/2" lintel	64
106S	16 x 8	Same as 106 without damper	64
142	16 x 8	2-slide die-stamped aluminum, self-framed on all sides	46
142F	16 x 8	Same as 142 with flange	46
179	16 x 8	Die-cast aluminum, 3-slide shutter	56
189	16 x 8	All aluminum construction, 3-hinged louver	74
189G	16 x 8	Galvanized, 3-hinged louver	74
199	16 x 8	Polypropylene plastic, 2-slide shutter	39
J209	16 x 9 1/4	Polypropylene plastic, 2-slide shutter	47
2711	1 brick	Extruded aluminum overlapping top & bottom mortar ribs 7 7/8 x 2 3/8 x 3 3/8	12
2712	2 brick	Extruded aluminum overlapping top & bottom mortar ribs 7 7/8 x 5 1/8 x 3 3/8	23

How many Foundation Vents do you need?

FOUNDATION VENT SYSTEMS	Your attic floor space to be ventilated in square feet.					
	1000	1500	2000	2500	3000	3500
106L	15	23	30	38	45	53
179	18	26	35	43	52	60
189	13	20	26	33	39	46
199	25	37	50	62	74	87
J209	21	31	41	52	62	72

Chart instructions available on page 5.

Note: Lomanco foundation ventilation product requirements are based on the 1/150 rule.

See page 14 for the PCV-1, a powered solution to upgrade foundation ventilation.
